Aspiring Software Developer | Game Development Enthusiast

CAREER OBJECTIVE

Motivated BCA student with strong interest in software development, game design, and AI-driven applications. Passionate about building real-world projects involving backend systems, computer vision, and interactive experiences. Seeking an opportunity to contribute to production-level systems while continuously learning and improving in a collaborative environment.

Education

NITTE Institute of Professional Education – BCA (AI) (2024–2028)

Sri Govinda Dasa PU College – PCMC (2020–2022)

Technical Skills

Languages: Python, Java (Basic), C/C++ (Basic)

Web/Backend: Flask, HTML, CSS

Database: MySQL

Tools: OpenCV, MediaPipe, Twilio API, Blender, Unreal Engine

Concepts: Problem Solving, Backend Dev, Computer Vision

Projects

College Management System (Flask, MySQL, HTML, CSS)

- Developed a backend-driven web application to unify multiple academic functionalities into a single platform
- Implemented **authentication system (login & registration)** with database integration
- Designed and developed backend features for **class creation, deletion, and student assignment**
- Built role-based access system for **Admin, Teachers, and Students**
- Contributed to frontend (login & registration UI) and backend architecture

SOS Gesture Recognition (Python, OpenCV, MediaPipe, Twilio)

- Built a real-time **computer vision system** to detect SOS hand gestures
- Implemented gesture detection using **MediaPipe hand tracking**
- Integrated **Twilio API** to automatically send emergency SMS alerts
- Designed logic to trigger alerts based on **gesture duration and consistency**
- Developed independently as a complete end-to-end project

Dog Breed Detection (Python, ML)

- Developed a machine learning model to classify dog breeds from images
- Trained model using labeled datasets and implemented prediction pipeline
- Built image input system for real-time classification
- Executed as an independent project

Indie Game Development (Ongoing - Unreal Engine, Blender)

- Designing and developing a **horror/adventure game** with focus on player experience
- Creating **3D assets and environments using Blender**
- Working on gameplay design, mechanics, and environment storytelling
- Exploring level design and interactive systems

Additional Information

- Actively exploring game development and 3D design workflows
- Sharing development progress and creative work on social platforms
- Strong interest in building innovative and user-focused applications
